

CREATING THE RIGHT ATMOSPHERE by caring for your air

Air Conditioning Servicing & Cleaning

**Total Service
including both
Internal &
External Cleaning**

Maintaining an Investment...

Ensuring fully working and efficient air conditioning units in your buildings won't always be at the top of the priority list. However, if your AC units are not serviced at regular intervals (every 6 or 12 months), there is a high possibility that they are not doing the job they were bought for. Fully operational AC units recycle the air in your building, redistributing it as either cool or warm. This process involves dust and pollutants being collected in the unit's filters and if left over extensive periods of time this dirt and grime will block the filters and cause main components to overheat and seize up. Unfortunately this lack of maintenance increases the demand put on your AC unit and could lead to breakdowns, expensive repair costs, and higher energy use.

Aircare Europe provides a full service & maintenance check and test to your indoor and outdoor units to maintain quality of performance. Protecting your equipment will keep your AC units running at their full potential, give you peace of mind, and protect your investment.

Service Procedure

Internal Parts

- Remove and clean filters
- Check condition of fan blades
- Chemically clean Condenser / Evaporating Coils and equipment
- Check Condensation Tray and Outlet
- Test running temperature, cool/heat

External Parts

- Test Electrical connections
- Test refrigerant running pressures
- Check for leaks & clean the unit
- Test compressor conditions
